“The Economic Report” show to feature ZN Custom Building

May 26, 2008, Deerfield Beach, FL – The producers of **The Economic Report** are pleased to announce that *ZN Custom Building* will be featured in an upcoming segment on topics, trends and issues related to the show's *Energy Solutions for the 21st Century* series.

‘Green’ homes use less energy, water and natural resources, create less waste and are healthier for people living inside. They more durable than conventional homes and greatly improve the overall quality-of-life for home owners.

As a leader in the modular home industry, ZN Custom Building has partnered with modular home manufacturers in order to offer state-of-the-art, environmentally-conscious homes.

“Modular Homes are built greener and are friendlier to the environment than stick built homes. Conventional building practices require bringing the raw materials to the home site and constructing the house from them. That involves a lot of transportation costs and energy, wasted materials, and the home is more susceptible to the weather during building,” says Michael Zenga, Founder & President of ZN Custom Building. “Modular homes are better insulated, and require less energy to heat and cool. They also use fewer natural resources and create less waste than stick built homes. Our homes are built meeting many of the National Association of Home Builders (NAHB) green requirements.”

ZN Custom Building uses the latest green technologies including radiant sub-floor heating systems, low VOC paints, high-quality insulation and air sealing products, and lumber from certifiable renewable forests.

“In addition to being green, our modular homes can also be customized,” says Zenga. “We can design and maintain a home building plan that sticks to a specific budget. We can also work from blueprints and make small design modifications if needed along the way.”

The five-minute segment will highlight ZN Custom Building's green solutions to modular home building and will feature interviews from Zenga and others.
